

RING SIZE GUIDE

This tool is a guide to assist you in determining ring size. For a precise measurement, it is recommended to consult with a professional jeweller.

How it works

Choose a well-fitting ring that the intended wearer currently wears on the same finger as the ring will be worn.

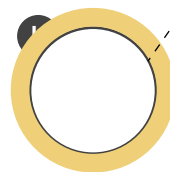

Place the Ring on the Chart:

Position the ring over the circles on the chart, starting with the size you think is most appropriate. Ensure the ring is placed on the circle without any tilt to get an accurate measurement.

Finding the Perfect Size:

You will know you have the correct size when the ring fits over a circle without any extra space inside the ring, and the printed circle exactly matches the inside of the ring.

The outer edge of the circle should be just visible against the inner edge of the ring without gaps.

If the ring sits between two sizes, the larger size should be chosen.
